

MIPS operands

| Name | Example | Comments |
|-----------------------|--|---|
| 32 registers | \$s0-\$s7, \$t0-\$t9, \$zero, \$a0-\$a3, \$v0-\$v1, \$gp, \$fp, \$sp, \$ra, \$at | Fast locations for data. In MIPS, data must be in registers to perform arithmetic, register \$zero always equals 0, and register \$at is reserved by the assembler to handle large constants. |
| 2^{30} memory words | Memory[0], Memory[4], ..., Memory[4294967292] | Accessed only by data transfer instructions. MIPS uses byte addresses, so sequential word addresses differ by 4. Memory holds data structures, arrays, and spilled registers. |
